

SK700-II

The SK700 just got better

FUEL DISPENSING AND CONTROL • SITE AND RETAIL MANAGEMENT • SUPPORT SERVICES

The SK700 has evolved. By building on the highly reputable and successful foundations of the SK700, Gilbarco Veeder-Root have ensured that the SK700-II is as reliable and flexible as its predecessor - but even better.

Lowest total cost of ownership

SK700-II is built and designed to the highest possible standards. The hydraulics and electrics have been redesigned, for quicker and easier servicing. Less downtime translates into a boost for your bottom line.

Leading edge technology

The SK700-II is equipped with the Gilbarco Veeder-Root Ecometer™, field-proven to be the most accurate of all metering technology in the industry, and Vapour Recovery Stage II, the best quality vapour recovery unit on the market.

Superior end-user experience

The SK700-II incorporates 'best-in-class' hose usability with further reach and effortless handling. Reduced noise levels and a more user-friendly interface will improve your site's environment, draw customers and distinguish you from the competition.

Adaptable to suit customer needs

Split Weights & Measures and non-Weights & Measures functionality, a wide variety of CRIND options and its modular design mean that the SK700-II won't get left behind as the market progresses. It's also compatible with alternative fuels, such as biofuels and E-85 and is MID approved.

Perfection isn't easy but we thrive on trying to get there. The result? The best fuel dispenser on the market just got even better.
